Project Report: Solar Street Light Maintenance Drive for a Rural School

Trainee: Meena Sharma (Solar Technician) | Version 1 - first draft

Aim

To repair the solar street lights at the school.

What I did

I went to the school with my group. There were some street lights that were not working. We cleaned the panels and checked the batteries. Some wires were loose so we tightened them. After that most of the lights were working.

We also told the school peon to clean the panels sometimes.

Conclusion

The work was done and the lights are better now. I learned about solar lights.
